Note. F, females; N, number of participants who consented; NR, none reported; WL/NT, wait-list/no treatment controls.

^aIn some cases, intervention details (number of sessions and/or total dosage) were estimated based on range of values and/or details reported.

^bOverall behavioral outcome category reported at first post-intervention assessment (some studies reported behavioral outcomes at subsequent assessments, did not assess behavior, or behavioral outcomes were collapsed across multiple health domains unrelated to our outcome category).
